BELCO APPLICATIONS

BELCO XT[®] PRESERVATIVE TREATED PRODUCTS

▲ **BATTEN** - Narrow strips of wood used to cover joints or as decorative vertical members over plywood or wide boards. Adds texture and visual interest while providing additional weatherproofing.

Typically 1x2, 1x3

▲ **BALUSTER** - Vertical members in a balustrade, offering support and safety while enhancing visual appeal and architectural style of stairs, balconies, and porches.

Typically 2x2

▲ **RAIL** - Horizontal members in a balustrade. Provides safety and support while contributing to the aesthetic design of stairs, balconies, and porches.

Typically 2x4

▲ **BARGEBOARD/RAKE** - Exterior house trim along a gable. Similar to fascia, but specific application for gables. Provides decorative finish while protecting the roof structure from weather damage. Bargeboard also provides a positive nailing surface for the roof sheathing.

Typically 2x8

▲ **BELLY BAND** - The nontechnical term for decorative cladding that runs horizontally around a house or building. It usually wraps around the building at the height of the first or second floor and is typically used as a breakpoint between two different styles of siding ie. lap and shake.

Typically 2x10, 2x12

▲ **CORNER TRIM** - Decorative trim to help protect the corners where siding joints come together. Innovative one-piece installation, adding structural integrity, and eliminating typical horizontal butt joint issues as well as the need for vertical corner seams.

Typically 2x4

▲ **PORCH POST** - Glulam wood, fully laminated structural column for porches and decks. Manufactured to eliminate the need for additional wrapping, substantially cutting labor costs.

Typically 6x6

▲ **SOFFIT** - A soffit is a functional and decorative ceiling application used to cover the underside of eaves,

overhangs, and exterior ceilings. Belco Pattern offers a range of profiles and finishes—from reversible tongue-and-groove boards to factory-stained wood ceilings—designed to add depth, warmth, and architectural detail while concealing structural elements like rafter tails and roof sheathing.

Suitable for both exterior and interior ceiling applications, Belco Pattern provides a consistent, high-quality look across the entire project.

Typically 1x6

▲ **DRIP EDGE** - Trim strip under the roof edge installed on bargeboard (gable end fascia) to protect against moisture intrusion. The drip edge is cap flashed to protect against rot while providing a standoff so that the water that runs off the gable end does not leak down over the barge causing unsightly streaking and potentially rot.

Typically 1x2, 1x3

▲ **GARAGE WRAP** - Decorative trim enclosing the garage framing members. Enhances the aesthetic appeal of garage, and protects against moisture and pests.

Typically 2x8

▲ **FASCIA** - Horizontal boards attached to rafter/truss ends at the eaves or face of the overhang. Serves as a termination point for roof sheathing as well as providing additional positive nailing surface. Also provides an extra layer of protection between the gutter and truss tails.

Typically 2x8

▲ **FRIEZE (TOP OF WALL)** - Trim member connecting the siding with the soffit. Enhances architectural detailing and provides a finished look to the exterior by trimming out and hiding the cut edge of the siding at the top of the wall.

Typically 1x4

▲ **WINDOW TRIM** - Decorative trim elements for windows to add visual interest through increased textures and shadow lines. Enhances aesthetic appeal and functionality of windows.

Typically 1x4, 5/4x4

▲ **WINDOW SILL** - Decorative trim elements for windows that provide surface for water runoff. Maximizes style continuity while providing weather resistance and structural integrity.

Typically 2x3
